Longevity Program

Dear Customers:

As continuity of supply is an important topic to semiconductor products nowadays, MCC intends to launch Longevity Program which aimed to support our customers with certain years of continuity of supply for example below :

- Industrial Grade products \geq 5 years
- Automotive Grade products \geq 10years

MCC Longevity Program is reviewed, updated regularly by our Executive Management, Supply Chain and Product Team. MCC will communicate well with our internal manufacturing, as well as external partners that will help us to fulfill customers' needs over the long term.

MCC has set internal guidelines which our products are not eligible for EOL if with below condition:

- Product with active revenue (backlog) within last two years (seven years for automotive)

This condition ensure that we will not simply EOL MCC products but in the rare event that MCC must EOL due to potential issues may affect the product quality or ability to manufacture the products, MCC will send out PCN / PDN which follow JEDEC requirement.

The Longevity Program is good as commercial assumptions only, there will no legal rights to be derived from our program. MCC retains the right to amend any statement in Longevity Program when necessary. MCC will put big effort to continually supply to our customers over long term as our goal.

Micro Commercial Components
